Copy-ready executive Copilot prompts

C776 · v1.0 · 1 October 2026

Use these in an approved Microsoft 365 work account. Attach or paste only the synthetic source pack. Workflows may require Frontier access and features vary by tenant. If a feature is unavailable, use these prompts as an offline design and test framework; label the result simulated.

NS-21 — Check data access

```
Help me complete a Microsoft 365 Copilot business task. I am reviewing two synthetic role-based document sets. Use only the attached Northstar Service source pack, particularly NS-21. Review what a workflow can read and where output goes. Draft data boundary map for a leadership audience. Show the source behind every material claim, label assumptions, surface the strongest counterargument, and state what the human decision owner must verify. Apply this decision gate: Data owner approves sources and recipients. Do not invent figures or claim that a simulated action was deployed.
```

NS-22 — Verify source freshness

```
Help me complete a Microsoft 365 Copilot business task. I am reviewing current and retired service rules. Use only the attached Northstar Service source pack, particularly NS-22. Test the draft workflow against both versions. Draft source test record for a leadership audience. Show the source behind every material claim, label assumptions, surface the strongest counterargument, and state what the human decision owner must verify. Apply this decision gate: Current rule governs action. Do not invent figures or claim that a simulated action was deployed.
```

NS-23 — Set approval responsibility

```
Help me complete a Microsoft 365 Copilot business task. I am reviewing service, risk and it roles. Use only the attached Northstar Service source pack, particularly NS-23. Assign who reviews, pauses and restores a workflow. Draft plain-language responsibility card for a leadership audience. Show the source behind every material claim, label assumptions, surface the strongest counterargument, and state what the human decision owner must verify. Apply this decision gate: Each consequential action has an owner. Do not invent figures or claim that a simulated action was deployed.
```

NS-24 — Plan incident response

```
Help me complete a Microsoft 365 Copilot business task. I am reviewing synthetic misrouted notification. Use only the attached Northstar Service source pack, particularly NS-24. Write a pause, contain, notify and retest path. Draft incident response card for a leadership audience. Show the source behind every material claim, label assumptions, surface the strongest counterargument, and state what the human decision owner must verify. Apply this decision gate: Risk owner decides restart. Do not invent figures or claim that a simulated action was deployed.
```

NS-25 — Review workflow value

```
Help me complete a Microsoft 365 Copilot business task. I am reviewing five sample requests and review minutes. Use only the attached Northstar Service source pack, particularly NS-25. Compare manual and assisted handoff times. Draft workflow pilot scorecard for a leadership audience. Show the source behind every material claim, label assumptions, surface the strongest counterargument, and state what the human decision owner must verify. Apply this decision gate: Include human review and error effort. Do not invent figures or claim that a simulated action was deployed.
```
